Round of 32 **13 / 16**

Round of 16 **6 / 8**

Quarter-finals **1 / 1**

TOP 5 CONTENDERS ALL STILL ALIVE

- | | | | |
|---|---|-----------|-------|
| 1 |  | France | 30.3% |
| 2 |  | Argentina | 18.9% |
| 3 |  | Spain | 15.4% |
| 4 |  | England | 15.1% |
| 5 |  | Belgium | 10.1% |

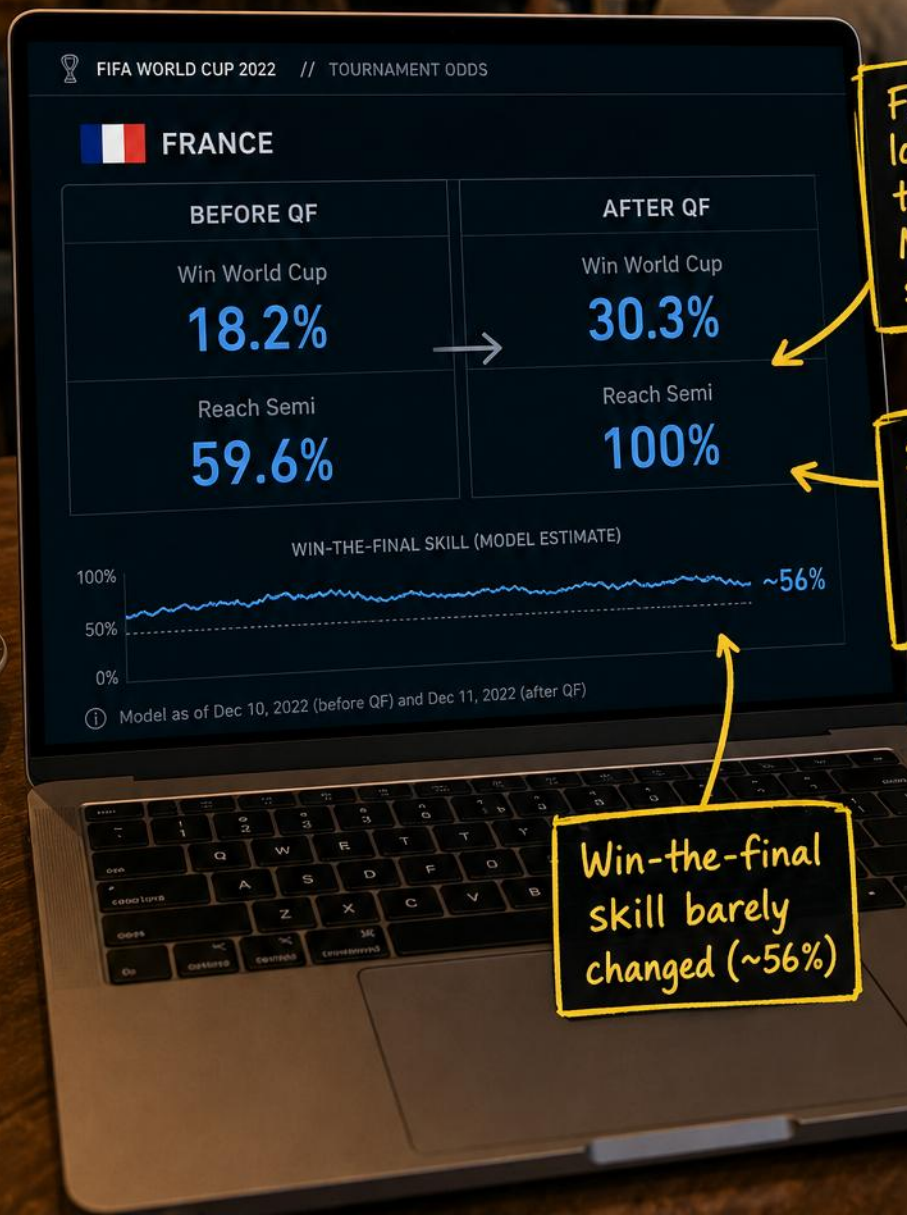

All top 5 favorites still in the tournament

3 / 6

Why did France jump so much?

Bracket math — not the model suddenly rating France higher.

France no longer has to beat Morocco in simulation

Same model. One real result locked in.

Win-the-final skill barely changed (~56%)

FRANCE
+
ALLEZ LES BLEUS!

Model limitations (1/2)

4/6

Documented in the project –
not hidden.

KNOWN LIMITATIONS – DATA & FEATURES

- FIFA rankings use a 2026 snapshot for all historical training matches
- Top predictors are backward-looking: FIFA points, H2H, ranking diffs
- Rolling form features exist but carry less weight (~4% each)
- Elo ratings are a current snapshot – 36% null in training data

Model notes

- Data quality
- Features
- Validation

FOOTBALL

Model limitations (2/2)

What this model can and can't do.

KNOWN LIMITATIONS — SCOPE & ACCURACY

No player-level data — injuries, suspensions, squad depth not modeled

~62.1% match accuracy on competitive internationals (2018-2026)

Match model predicts pairwise outcomes; bracket tree enforced in simulation

Not a betting system — built as an ML learning project

Dropping FIFA rank alone barely changes performance — points_diff carries the signal

MODEL NOTE

- features
- training
- tuning
- validation

Predict → Simulate
